Figure 10 consists of two polar plots side-by-side, showing the distribution of the number of detected particles per unit area and unit solid angle. The left plot is for the 1000-1500 GeV energy range, and the right plot is for the 1500-2000 GeV energy range. Both plots show a similar pattern of particle distribution with a color scale from 20.0 to 60.0. The plots are circular with radial lines at 45° intervals (0°, 45°, 90°, 135°, 180°, 225°, 270°, 315°) and concentric circles at intervals of 10 units (10, 20, 30, 40, 50, 60). The color scale is indicated by a vertical bar on the right of each plot, ranging from 20.0 (red) to 60.0 (purple). Below each plot, the text 'Data starts 2026 01 14 00:00:00' is displayed.

Figure 1 is a line plot showing the elevation of the sun in degrees over a 24-hour period for various latitudes. The x-axis is labeled "Time, hours of day" and ranges from 0 to 24. The y-axis is labeled "Elevation, degrees" and ranges from 0 to 90. The plot displays multiple lines representing different latitudes, color-coded from 20.0 to 60.0 degrees. The lines show a periodic, sinusoidal-like pattern, with higher latitudes generally having higher peak elevations and lower minimum elevations. A color bar on the right indicates the latitude values.
