Figure 10 consists of two polar plots side-by-side, showing the distribution of the number of detected particles per unit area and unit solid angle. The left plot is for the 1000-1500 GeV energy range, and the right plot is for the 1500-2000 GeV energy range. Both plots show a similar pattern of particle distribution with a color scale from 20.0 to 60.0. The plots are polar plots with the angle in degrees (0° to 315°) on the horizontal axis and the number of detected particles (20 to 90) on the vertical axis. The color scale indicates the number of detected particles per unit area and unit solid angle, ranging from 20.0 (red) to 60.0 (purple). The data starts on 2025 06 09 00:00:00.
